Dear patient,

Having a good outcome and being healthier than you were prior to your procedure is our goal. Your doctor has made a comprehensive evaluation prior to your procedure. The following are some reminders:

1. Discontinue aspirin or any medications containing aspirin (including Advil, Motrin, or any non-steroidal anti-inflammatory medications) **7 days prior to surgery**. You may substitute Tylenol for these medications unless instructed by your physician not to.
2. Take all routine medications as directed by your physician and please inform our office which medications you are currently taking.
3. Inform our office if you are currently taking any anti-coagulant medications (i.e. Aspirin, Plavix, Coumadin, etc.) Discontinue these medications **7 days prior to surgery** unless instructed by your physician not to.
4. Take any prescribed antibiotics as directed for pre-medication for heart murmurs, history of endocarditis, artificial heart valves, hip replacement (less than 2 years).
5. If our office has prescribed an antibiotic for your surgical treatment, start taking it the day prior to your surgical appointment. Continue the medication until finished.
6. Eat a light meal prior to your surgical appointment. Avoid heavy/greasy foods and caffeine. Drink plenty of water 2 days prior to your appointment.
7. Plan to rest at home the remainder of the day.
8. You will be able to drive yourself home after surgery but you may wish to arrange for someone else to drive you home. If you wish to take an oral sedative such as Halcion or Valium, **you must have a driver to and from your appointment.**

Please contact us if we could be of further assistance. Our team at Significance Dental Specialists care about you.
