Introductory Letter from Dr. Allen Huang

Dear Friend,

If you are researching for a periodontist, especially a Pinhole Surgical Technique™ leading authority, to treat gum recession for yourself, your spouse, parents, or a loved one, you are in the right place. Just like every mouth is different, each periodontal practice and treatment process is different. Dr. Huang is a world leader in advanced Pinhole Gingival Graft Technique, dental implants and periodontal treatment options, including comprehensive dental implants, All-on-Four (Teeth-in-One-Day, minimally invasive sinus augmentation, and advanced CGF (Concentrated Growth Factor) bone grafting technique. **"We want you to feel as comfortable as possible during your visit. Our caring team specializes in transforming your smile and improves your gum recession in just one hour!"**

"I want you to feel as comfortable as possible during your visit at Significance Dental Specialists. Our caring team specializes in transforming your smile and improving your gum recession in just one hour!"

When you come to our office, a comprehensive periodontal exam and full mouth x-ray will be provided for you to help evaluate your bone height, quality of your gum tissue, and the degree of gingival recession. Also, our consultative and educational approach allows us to explain all options available to you, and determine if you are the candidate to receive Pinhole Technology to cure gingival recession. We will personally meet with you during the consultation to discuss your options and help you determine the most appropriate choice for you or your loved one. We want you to be sure you are making the best choice possible when it comes to gingival recession treatment.

There are so many advertisements offering gingival recession treatments in the Las Vegas Valley. As a periodontist and Pinhole Surgical Technique leading authority, I can understand how confusing this can be as a health care consumer. To help you choose the right treatment option for your gum recession treatment, please evaluate the report we have provided for you **"Why Pinhole Surgical Technique™ is the ONLY and the BEST Solution to Your Gingival Recession?"** Enjoy the report!

Sincerely,

Dr. Huang & Team

P.S. When you are ready, we urge you to schedule your **no-obligation Pinhole Surgical Technique™ Gum Recession consultation**, which includes an one-hour comprehensive gingival analysis and consultation with us with a limited time offer of \$149 (Total Value: \$349)!

What is gum recession?

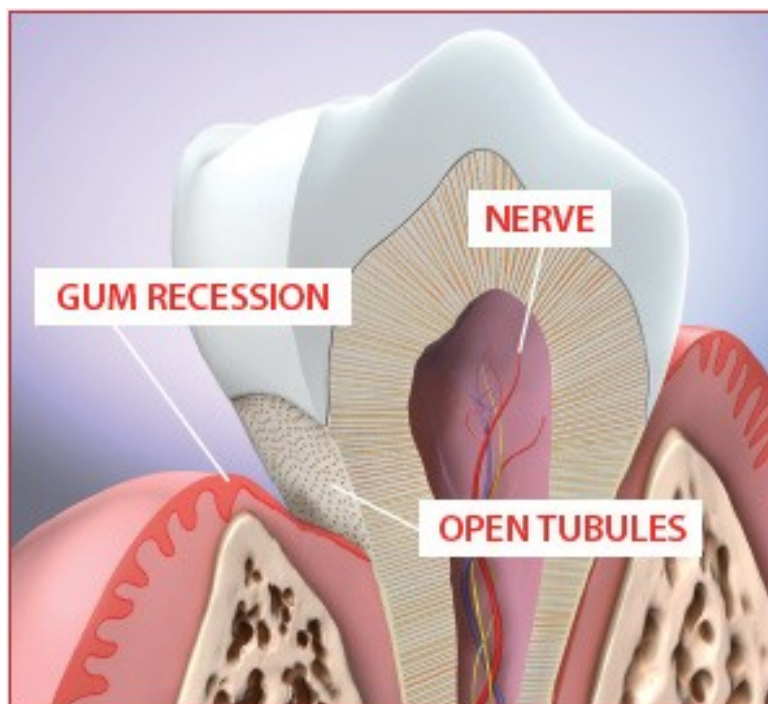

Gum recession refers to the loss of gum tissue along the gum line. This can occur as a result of periodontal disease (gingivitis, periodontitis, advanced periodontitis), the natural aging process, or abrasive habits when it comes to brushing the teeth.

#2: *Why Should Gum Recession be Taken Seriously?*

Why should gum recession be taken seriously?

When gum recession occurs, the root structure of the tooth becomes exposed. This means that tooth decay and other problems can affect the teeth along the gum line and beneath it. Most people with gingival recession experience increased sensitivity and black holes between teeth. The teeth also elongate, and patients tend to look aged or as though they have poor hygiene with exposed roots due to gingival recession. Since healthy gums are essential for a healthy mouth, getting gum recession treated is important for lasting dental wellness.

#3: What is the Pinhole Surgical Technique™?

What is the Pinhole Surgical Technique™ (PST™)?

The Pinhole Surgical Technique™ is a minimally invasive option for treating gum recession. Unlike traditional grafting techniques, PST™ is incision and suture free. Pinhole Surgical technique is an extremely technically sensitive procedure. It demands the most gifted and extensively-trained periodontists in order to deliver the ultimate esthetic and functional results. Dr. Huang is truly the leading authorities for Pinhole Surgical Technique™.

How does the Pinhole Surgical Technique™ (PST™) differ from traditional gum grafting?

Traditional gum recession treatments involve the use of donor tissue or soft tissue grafts in order to re-build the gum line. This soft tissue would be sutured in place and would join with existing gum tissue as it heals.

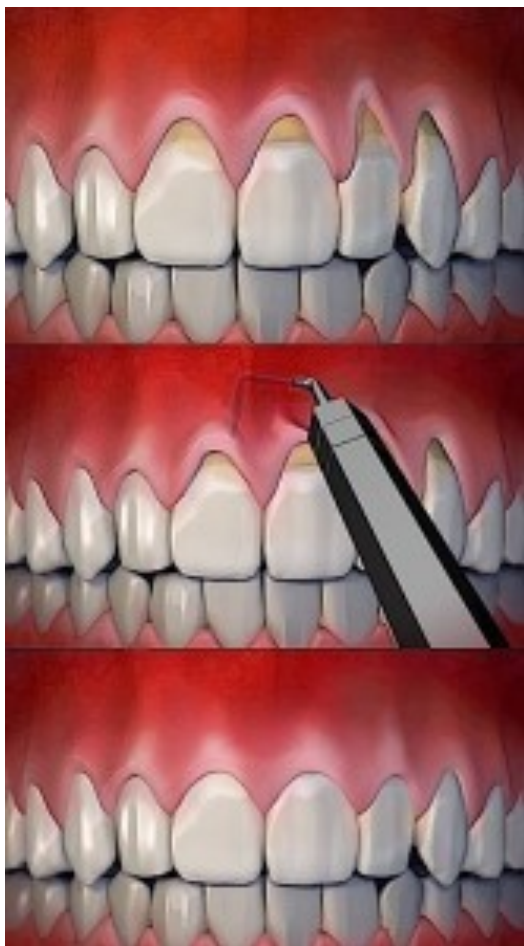

While this traditional grafting treatment is effective, comparable results with better patient experience can be achieved through the Pinhole Surgical Technique™.

Traditional Gum Grafting versus the Pinhole Surgical Technique™

How is Pinhole Surgical Technique™ (PST™) performed?

During the Pinhole Surgical Technique™, a needle is used to make a small hole in the patient's existing gum tissue. Through this pinhole, special instruments are used to gently loosen the gum tissue. These tools help expand and slide the gum line to cover the exposed root structure. There are no grafts, no sutures, and no incisions needed with the Pinhole Surgical Technique™. It simply involves the adjustment of the existing tissue.

#6: *What are the Benefits of the Pinhole Surgical Technique™*

What are the benefits of Pinhole Surgical Technique™ (PST™)?

The benefits of the Pinhole Surgical Technique™ are many:

- Less discomfort after treatment
- Faster recovery than traditional grafting
- No need for uncomfortable sutures
- No need for scalpels or invasive surgical tools
- No need to take donor tissue from the patient's palate
- Excellent, natural-looking, long-lasting results

Is the Pinhole Surgical Technique™ more expensive than traditional gingival graft?

Pinhole Surgical Technique in general is not more expensive than a traditional gingival graft. While there are limitations on how much tissue we can take from the roof of the mouth to graft the recessed teeth, PST offers no limits to the number of teeth we can treat. With PST procedure, 3-5 teeth are being treated and grafted in one sitting.

Will my insurance pay for Pinhole Surgical Technique™?

Not all dental insurance will cover the Pinhole Surgical Technique. With the PST procedure, a material fee of \$300 will be applied to your fees. Dental Insurance companies, after all, are still a business. Our insurance specialists will try to get the maximum coverage for your treatment.

Closing Letter from Dr. Allen Huang

Dear Friend,

I hope you found this report informative. I understand there is a lot to consider when choosing a periodontist treating your gum recession for yourself, your spouse, parents, or another loved one. I simply want to answer your questions, address your concerns, and give you the ultimate experience you deserve. During your visit, I will personally meet to help you decide upon the best treatment option for you or your loved one. I will answer any and all questions you may have regarding the treatment process from start to finish. You can be assured that we'll be there to assist you during the entire treatment process. We want you to feel as comfortable and informed as possible every step of the way.

I certainly recommend you do your research, but ultimately, you have to trust the surgeon and type of care and authority you rely upon.

I feel the utmost pride as my team and I am able to transform smiles, restore gingival recession and oral function, and get your normal life style back every day. Our goal is to provide an educational, caring environment and experience that leaves you feeling confident in your healthy gum and tissue for life time. Obviously, there may be other things you should know before choosing your periodontist for gum recession. In fact, I am sure I could have easily doubled this report, but I am confident its contents will help you choose your periodontist for gum recession. Bottom line is, By using Pinhole Surgical Technique™, we can treat your gum recession in a least invasive and most comfortable approach. I will definitely recommend Pinhole Surgical Technique™ to anyone, including my family members. We are always here to answer your questions and help you decide if we are the right choice for you or your loved one. You are going to love it here!

Sincerely,

Dr. Huang & Team
